Merlinus Verax:

OR,

A New ALMANACK and Prognostication, for the year of our Lord and Saviour Jesus Christ, 1668.

It being the Bissextile or Leap-year;

Wherein is contained a Double Kalender, the {English, or *Julian* and *Roman*, or *Gregorian*} Account, together with the Place of the Moon, her Change, Full, First and Last Quarters; Terms and their Returns; Weather; the Abstract of each Month in the year; Eclipses of the Luminaries; the Suns ingress into the four Cardinal points; with many other useful Observations.

By ROBERT NEVE, Gent. Student in Astrology.

Astra regunt homines, sed regit astra Deus.

LONDON, Printed by *A. I.* for the Company of STATIONERS. 1668.

Julian Account		*Gregorian* Ac.

E.	Dominical Letter.	A.
6	*Roman* Indiction.	6
26	Epact.	16
1	Number of Direction	4
January 19	Septuagesima	29 January
February 5	Dies Cinerum	15 February
March 22	Easter day	1 April
April 26	Rogation Sunday	6 May
April 30	Ascension day	10 May
May 10	Whitsunday	20 May
November 29	Advent Sunday	2 December

Times prohibiting marriage this year.

THe Legal time for Marriage is from the 13 of January until Septuagesima-Sunday, and then it goes again until Low Sunday; at which time it comes again, and goes no more out until Rogation-Sunday: From from that time it is forbidden until Trinity-Sunday; And from that time unto Advent-Sunday it is in use. But then it goeth out again, and cometh no more in until the 13 of January next year.

Note also, that Easter falleth this year the lowest it possibly can fall; *viz.* on the 22. day of March; it hath not done so in many years before, nor will it fall out so again in many years to come.

A brief and neceſſary Computation of years.

A Figure of Anatomy, shewing what part of the Body the Moon governs, by being in any of the Twelve Signes.

Of the Signs, Planets, and Aspects.

♈	Aries	♌	Leo	♐	Sagittarius
♉	Taurus	♍	Virgo	♑	Capricorn
♊	Gemini	♎	Libra	♒	Aquarius
♋	Cancer	♏	Scorpio	♓	Pisces

♄	Saturn	☉	The Sun.	♀	Venus
♃	Jupiter			☿	Mercury
♂	Mars			☽	Luna

☌	Conjunction.	☍	Opposition.	△	Trine.
✶	Sextile			□	Quartile

These are the Signes, the Planets and Aspects,
Which in this World do work all strange effects.

If thou be ſick, and help would'ſt have,
The Counſel of the learned crave;
If thou have health, to keep thee ſo,
Fly Idleneſs as deadly foe.

NEVE. 1668.

A PROGNOSTICATION,
Serving for the Year of our Lord and Saviour Jesus Christ 1668.

Wherein is exhibited the grounds of the alteration and condition of the four Seasons of the year: The Abstracts of each Month in the year, with many other matters pertinent to such a work.

TOGETHER,
With the true preparation of the Sympathetical Powder, and its manifold uses for the advantage of all people.

Collected, Penned, and Published, by *Rob. Neve* Gent.

The Sixty eighth Edition.

London, Printed by *P. Lillicrap* for the Company of Stationers, 1668.

London, Printed by P. Lillicrap for the
Company of Stationers, 1668.

The beginning and end of the Terms, with their several returns for the Year 1668.

Hillary Term begins January the 23 and ends February the 12 and hath four returns.

Octab. Hillary Jan. 22	Craft. Purif. Feb.
Quind. Hillary Jan. 29	Octab. Purif. Feb. 11

Easter Term begin Wednesday fortnight after Easter, and ends 4 days after Holy thursday, and hath 5 returns.

Quind. Pasch. April 6	
Tres. Pasch. April 13	Quin. Pasch. April 27
Mens. Pasch. April 20	Craft. Ascens. May 2

Trinity Term begins the friday after Trinity Sunday, and ends Wednesday fortnight after, and hath 4 returns.

Craft. Trinit. May 18	Quind. Trinit. June 1
Octab. Trinit. May 25	Tres. Trinit. June 8

Michaelmas Term begins October 23 and ends November 28. and hath 4 Returns.

Tres. Michs. Octob. 21	Craft. Mart. Novemb. 12
Mense Mich. Octob. 29	Octa. Mart. Novemb. 15
Craft. Anim. Novem. 3	Quind. Mart. Novemb. 26

The judges do not sit in the Courts at Westminster on these dayes, viz. on Candlemas day in Hillary: on Holy thursday in Easter: On St. John Baptist day in Trinity: On Allhallows day in Michaelmas Terms.

Note, that the exchequer openeth 8 dayes before any Term begins except Trinity Term, and then it openeth but four dayes before it.

Of the Eclipses of the Luminaryes which shall happen this year 1668.

There will four Eclipses happen in this year 1668 two of the Sun, and as many of the Moon, but unto us in England only the first of the Moon, and last of the Sun is only visible. They appear in the following order.

The first will be an Eclipse of the Sun upon the last day of April near our midnight, and therefore not to be seen of us, it will be visible unto those that inhabite the most remotest Southern parts of the earth, and our Antipodes. It happens in 11 degrees of Taurus, and in the fourth house of the Heavens.

The second will be an almost total Eclipse of the Moon, on Saturday May 16 about four a clock in the morning, it falls in 26 degrees of the Celestial sign Sagittary, but not visible as to us, the Sun at that time being above our Eastern Horizon, and the Moon below it in the West.

The third will be an Eclipse of the Sun on October 25 about one of the clock in the afternoon, and happens in thirteen degrees of Scorpio, this will be visible to all this part of the world, and beyond all peradventure concern it principally in its effects.

The fourth and last Eclipse will be of the Moon, and that a very great one, it happens on the 8 day of November in the afternoon, in 27 degrees of the earthly sign Taurus, nearly in conjunction with the Plejades, or 7 Stars. This Eclipse will be visible unto almost all the Oriental parts of the world, and will have as conspicuous effects attend it.

Some persons disaffected to Astrology, argue against the effects of Eclipses thus.

The Sun and Moon are more and longer obscured in the night, then in any Eclipse.

But by our constant nightly Observations cause no great effects in this Globe of earth do happen.

Ergo, Eclipses of the Luminaryes work no such wonderful effects, or are attended with such strange accidents as Astrologers fancy, and talk of.

This Argument is of no such weight as the enemies of Astrology imagine: and, were it not answered over and over by Astrologers already, and particularly by Dr. Gadbury in his vox Solis, p. 15 and 16. I should readily respond, by distinguishing of the Major proposition. For whoever shall consider that the universe is upheld and maintained by the magnetism of each part of it, and its relation one to another, will easily perceive that the shadow in its kind is as natural to the preservation of all things, as is the Sun: and doubtless it cannot be infallibly true, that the Evening and Morning make up the day: and the day is not perfect therefore without the necessary shadows of the night. Now one (I hope) I will offer to argue, that the month, year, or your ages, are imperfect without Eclipses happening in them, but I forbear, and refer my Reader to the foregoing Discourse: And shall conclude my Theam of Eclipses with those antient Poetical Observations

The great Conjunctions of great Stars,
Eclipse of Sun and Moon,
Do threaten Famine, Death and Wars,
if we repent not soon,
Now God above, and Wrath above,
and Heaven above relent,
And man beneath, and sin beneath,
and earth beneath repent.

A short Description of the four Seasons of this present year 1668.

1. Of the Winter Quarter.

WInter which is the greatest enemy to the Spring, (the disgrace of Summer, and the deep devourer of Harvest) began the last year, according to the Gallish or Julian account, on December, the 11th. day a little past five a Clock at night. At the entrance of the Sun into the very beginning of the Celestial Sign Capricorn at which time the Sun will have recovered his greatest Southern Declination from the Ecliptique or Equinoctial line, so that he seemingly now ritch South-East, and setteth in the South-West.

Now at this time is the Hyemal or Winter solstice made, or begun; for the Sun is so far removed from our Zenith or vertical point, that he cannot decline any further, and here seemingly standeth at a stay, and then maketh unto us the shortest day and longest nights in the whole year, and so this quarter continueth until the 19th. of March this year, at which time the Sun enters Aries, and begins the Spring.

This season is naturally cold and moist, unpleasant for the most part to Travellers, by Land, or voyagers by Sea, and unto aged persons it is very noxious and troublesome, causing superfluities of raw humours, and abundance of cold moistness to overflow their bodies to their great grief and disquietness.

Sundry sorts of sicknesses and diseases are likely to be rife in mens bodies this quarter, as cold Rhumes, Coughs, Palsies, Gouts, Cramps, Convulsions, Lethargies, Epilepsies, Apoplexies, Cholicks, Hoarseness, Flux, Rheumatisms, pain in the Teeth, noise in the Ears, Obstructions and Feavers.

Thus will the *Stars* if God assent,
Whose power alone can all prevent.

2. Of

2. Of the Spring Quarter.

THe Sun (which is Oculus Mundi, the eye of the world, Fons Lucis, the fountain of light, and the moderator of all the rest of the Celestial Lamps of Light) hath like a Gyant run his race, and finished his revolution (Gratis dictum) through the 12 Signs of the Zodiack. And now this 9th day of March hath an hour past 5 a clock in the evening he beginneth his journey forth again, and goeth an even course, and is becometh an indifferent Arbiter between the day and night, and maketh an equality, throughout his whole government to the great joy and comfort of all his reviving subjects, pearling with his illustrious countenance the poor weather-worn breasts of our opacous star of Mortality which the obscurer countenance of Winters extremity had almost totally vanquished and subdued. Whereat the earth begins to smile, and to put on her holy-day apparel, viz. The flourishing liveries of verdant Flora.

This season is by nature hot and moist, and the most temperate and equal time of the year, and the least breeder of sicknesses that are dangerous, and apt to terminate in Death. It is an admirable time for removing of distempers and griefs formerly gotten, and to hold and prevent those that are come. For now the vital senses and the spirits of men and other creatures are quickned and revived, and therefore the humours which do abound, & are readiest to oppress nature, are fit to be emptied and avoided, whether by bloud-letting purging, or otherwise, as the learned Physitian shall advise, and as the cause of the disease shall require, such persons therefore that are diseased let them not neglect this time.

The bodily diseases and infirmities that men are mostly subject unto in the Spring, are, Ephemera Fevers, Jaundies, Impostumes, Swellings, Quinancies, Boyls, Itch, Pushes, Tetters, Morphew, King-worms, Measels, Small Pox, Obstructions, bleeding at Nose, Spotted Fevers, and

All such dangerous infirmities that are likely to proceed from the corruption of blood,

Infections from the Stars may fall:
But one above doth stay them all

3. Of the Summer.

SUmmer is the third part of the year, according to our usual computation; For now when the Sun hath fully concluded the Spring in his passage through the last degree of Gemini, and is moved in his progress to the highest point of his course, namely to his entrance of the very first scruple of Cancer, which happeneth this year on the tenth day of June 8 hours 13 minutes P. M. or Afternoon, and so makes the second solstice of the year, called the Estival or Summer solstice. For as the Sun when he entred Capricorn had his greatest southern declination from the Equinoctial, so now at his ingress into the beginning of Cancer, he hath his greatest Northern declination from the said Equinoctial line. And even as at that time of the winter solstice, he was so far removed from our vertical point, that he could move no further towards the South, and was therefore to approach again towards our North Latitude, at which time he seemeth to be at a stand. So now by his being come so near our Zenith, that he cannot remove any further towards the North and is therefore to return again in his course towards the South.

At the first going from us, he seemeth also to be at a stand, (because his declination alters but a very small matter in many dayes, whence it is that your tropical points are termed invariable) Insomuch that as being at his return towards us again, he made with us the short[est] day and long[est] night in the year. So now at his departure from us, he maketh with us the longest day and shortest night in the year, and afterwards decli-

neth more and more from us, like as bee or removed more and more towards us.

This season according to his proper nature is hot and dry, turning the humors of mens bodies into hotness and dryness, resembling the ferment of fire, and complexion of Choller in man, bringing all fruits to their ripeness, cattel to their fatness, and men to their wealth.

The sicknesses and infirmities most likely to rule and reign over us this Quarter, are according to the judgment of Hippocrates and divers other learned writers in Physick and Astrology. Hot burning Feavers, Phrensies, Pluriſies, Inflamations, violent and pestilent Feavers, Impostumes and Ulcerations in the Lungs, Bladder and Kidneys, heat in Reins, the Obstruction, the Strangury, pissing of blood, Caruncles, French Pox, and such diseases as usually proceed from choller.

Though stars incline to work us ill
All shall be as the Maker will.

4. Of Autumn.

Autumn, according to the accustomed computation the last quarter of the year, beginneth at the Suns departure from the last struple of Virgo, into the first point or beginning of Libra, the second Equinoctial point or sign. And this year it happens on the 12th day of September somewhat past 12 of the clock before noon.

The day and Night now are of an equal length as, in the spring, For as the suns entrance into aries the day was or had been increasing ever since the winter solstice until he then came to be equal with the Night, going on still, more and more until the Summer solstice, which (as you heard before) was the longest day, and shortest night. So now the night by increasing from the Estival solstice, to the Suns ingress into the Equinoctial sign Libra, hath gotten to be equal with the day and will increase more and more, until the Brumall,

or Hyemnal solstice come again, at which time the night will be the longest, and the day shortest.

This season of the year is of it self inconstant and variable, inclining to warmth in the day time, and to coldness in the Night, because the Sun goeth now very far beneath our Horizon, and leaves us the more destitute of his benigne and refreshing rayes. This Quarter as Hypocrites wisely saith, may (by reason of its unequal Temperature) properly and rationally bestled the mother or Nurse of all other deadly sicknesses. And that other Oracle of Physick, the famous and learned Galen saith, that this time of the year is exceeding dangerous, yea, pernitious for taking sickness in

The sad and grievous distempers and infirmities, which generally afflict mankind at this time of the year, are these several following, viz. Murrine Agues, inconstant Lethargies, Hemerhoides, Fistula's, Fluxes, Tenesmus, or being hard bound, or Costive in body, Pains in the Back and Reins, the Stone, Dysentery, Suppression and stopping of the Urine, Gouts, Jaundices, Sciaticaes, Podigra's, Palsies, Convulsions, Cramps, Consumptions, Madness, Sottishness, or distraction by Melancholy, pain in the sides, Windiness, Scurvy, obstructions of the spleen, and such like diseases that thence arise and proceed.

Thus every Planet in his kind,
Is to perform the Almighties mind.

And thus much of the four principal Seasons of the year,

I ſhall acquaint you with ſome neceſſary and uſeful obſervations belonging unto each Month in the year, as alſo with the riſing and ſetting of the Sun every ſeventh day in every Month, which you may pleaſe to obſerve in the following familiar method.

In January.

Day	Sun riſeth	Sun ſetteth.
1	8 Ho. 3. M.	3 Ho. 57. M.
7	7 Ho. 56. M.	4 Ho. 4. M.
14	7 Ho. 46. M	4 Ho. 14. M.
21	7 Ho. 34. M.	4 Ho. 26. M.
28	7 Ho. 23. M.	4 Ho. 37. M.

In this month let not bloud, neither be you to buſie with phyſick of any kind, except great neceſſity urge and conſtrain you, you muſt alſo beware of catching cold, for in this month Rhumes and Flegme do very much increaſe: to faſt long is hurtfull, but to drink white wine (I rather judge Sack, if it be good better) faſting, is good and wholeſome, alſo meats that are naturally and moderately hot, and wear warm cloaths.

In matters of buſineſſes relating to husbandry you may this month ſet all kinds of common fruit trees, & plants, as pears, plumbs, filberts, walnut, and ſuch like, hawthorn, and all ſorts of quick-ſets, or plants, are fitteſt to be ſet or planted, from the change of the Moon, unto her firſt quarter.

Take

Take away Mols, and superfluous branches from your Trees, and this month is good to set beans, peals, parsnips, leeks, radish, garlick, turnips and onions, if the weather prove mild, and the moon be past her full, so as she be decreasing in her light.

Good husbands also this month crop Trees, fell timber, and geld cattel, such I mean that are to be gelded, the state of the moon is alwayes to be considered.

In February

Day	Sun riseth	Sun sets
1	7 ho. 13. m.	4 ho. 47. m.
7	7 ho. 4. m.	4 ho. 56. m.
14	6 ho. 50. m.	5 ho. 10. m.
21	6 ho. 34. m.	5 ho. 26. m.
28	6 ho. 22. m.	5 ho. 38. m.

You must in this month forbear and eschew as enemies to your health, all kind of fish, milk and rice, and all other kind of diet also that doth oppilate and stop the liver and veins, or any way thicken the blood, you should also forbear letting of blood, and all kinds of physick, (unless Kitchin Physick) except necessity require, and the learned Physitian direct you thereunto, beware also of taking cold, for now are agues most apt to be taken, it is also very dangerous to take heats, and after meats cold upon them.

It is a most apt time to graft or plant, and for to set all kind of trees and bushes, the wind and weather, and age of the moon considered, peals, beans, hastings, onions, parsnips, and such like herbs may very fitly be set in the decrease of the moon, as in January.

Now it is a very proper time to trim up Gardens to sow and sow all kind of Kitchen-herbs, to set slips sow Kernels, Mustard-seed Oats, set Hops, cut vines, and prune them, and now you may also stick up your Kounthal peale, and your hastings

In

In March.

Day	Sun riseth	Sun sets.
1	6 ho. 20. m.	5 ho. 40. m.
7	6 ho. 8. m.	5 ho. 52. m.
14	5 ho. 54. m.	6 ho. 6. m
21	5 ho. 16. m.	6 ho. 44. m.
28	5 ho. 22. m.	6 ho. 38. m.

In this month the humors of mans body begin to increase, and now grow feeding, breedeth gross blood and humours, men should eat of meat that is of good and quick digestion, and such that is known by experience to yield good iuice, drink moderately but not over fresh least you inflame the blood, and make it at this time boyl too fast: It is a very good time to purge and clarify the blood by potions, bathing and (if botomy, or such other ways as the learned Phyetian shall appoint, and as the cause of the disease shall require, may now prove useful and necessary; Also in this month, sweet meats and sweet drinks, are wholesome and commendable.

The time of grafting and planting as yet endureth together, with setting and sowing all such herbs as were mentioned before, pruning & plashing of vines, quickets, Barr trees, or Roots, Willows, Oaks, Pales, Onions and parsnips, still may be sown.

In

In April.

Day	Sun riseth	Sun sets.
1	5 ho. 18. m.	6 ho. 42. m.
7	5 ho. 6 m.	6 ho. 56. m.
14	4 ho. 54. m.	7 ho. 6. m.
21	4 ho. 39. m.	7 ho. 21. m.
28	4 ho. 29. m.	7 ho. 31. m.

NOw in this moneth of April the pores of mans body are opened, & they are generally in good disposition to take physick, chiefly such as is preventative. And they that will drink it at this time, I shall answer to the courtesie of nature, if so be she will afford them any benefit: for of all times in the year, this is the best time to prevent and take away the causes of diseases, and for to make a speedy remedy in extremities, for now the pure bodily strength and vigor through each part of the body (I mean only such as is tractable) beareth, she soon vanquisheth by means of Physick. wherefore what cannot be done now, will hardly ever be done hereafter. take time therefore while time is, &c. Post est occasio Calvo.

As yet you may graft and plant and also prune vines, mulberies, cittrons, colecumbers, artichoaks, peaches, and sow barley, teach peale to climb. Vines should now apply themselves to barking of trees.

In May.

May	Sun riseth	Sun sets
1	4 ho. 23. m.	7 ho. 37. m.
7	4 ho. 15. m.	7 ho. 45. m.
14	4 ho. 5. m.	7 ho. 55. m.
21	3 ho. 50. m.	8 ho. 10. m.
28	3 ho. 56. m.	8 ho. 4. m.

Rise early in this moneth of May, the Sun at this time no sluggards, and let such as be in health and strength forth into the fields, and eat and drink early, yet [illegible] it be with moderation, for it is now very good & wholsome, abstain from all meats that be of a hot nature.

It is a very good time of the year for them that be sick, to be either let blood, or else to take physick: also to cleanse their bodies of all noxious diseases, but to keep that be healthy, exercise is the best medicine, this and that alone (with Gods blessing) they may preserve themselves in health.

The season is very fit to sow buck, muskmelon with such seeds as before might not be sown, because of the coldness of the weather: Set sage abroading by the moneth.

Set Sage in May,
'Twil last alway.

Now flax and hemp, set artichoaks, sow in your herb and gardens, see to your grafts, that no superfluous branches trouble them, sow dew, rosemary flowers, and bean flowers, now you may walk at your leisure, top your Beans now for hoyled sallets, & have a great care of watering your Pots.

In June.

Day	Sun riseth	Sun setteth.
1	3 Ho. 49. M.	8 Ho. 11. M.
7	3 Ho. 47. M.	8 Ho. 13. M.
14	3 Ho. 46. M.	8 Ho. 14. M.
21	3 Ho. 49. M.	8 Ho. 11. M.
28	3 Ho. 52. M.	8 Ho. 8. M.

In this month if necessity urge, and thou needs must make vse of Physick, take it early in the morning, that it may have wrought fully before the heat of the day and vse a light and gentle diet, for the stomach is now in the weakest digestion, now at the same rate it toucht in the winter, or in some of the former months, and is good and convenient for most bodies now to purge clarified whey boyled with cold herbs, and to abstain from all violent exercise.

Distilling of roses, and making of Syrups, and Confections now employs all ingenious persons; and have leisure, now you may gather such herbs as you intend to keep all the year, but be sure you dry them in the shade before you lay them up for the winter use. Most of good husbands are busied in weeding their corn and gardens, and others are busie in weeding gardens, the time serves to set rosemary and gilly flowers, and therey of cutting your hedges, or trees or herbs with your knife, but rather gather what you desire from them with your fingers. now you may set saffron, and make your hay, (if the weather serve your purpose,) and rid gardens of snails, ants, or pismires.

In July.

Days	Sun rises	Sun sets.
3	hour 34. m.	8 ho. 6. m.
7	3 ho. 50. m.	8 ho. 1. m.
14	4 hor. 8. m.	7 ho. 52. m.
21	4 ho. 20. m.	7 ho. 40. m.
28	4 hor. 30. m.	7 ho. 30. m.

In this month be rolls herbs and roots a [illegible] [illegible] [illegible]

ties, do not addict your self to sleep overmuch, especially in the afternoons, for making of applications, and for the better avoiding the head-ache, and Cathars, not let meats digest from the stomach: use of Tinctures, and take little Physick, except necessity compel:

Now Ladies look to have waiting men and women enough to attend her, those that would have good Rose of Jericho (and that good) for their gardens the next Year, must gather them of their own now set in buying (they lose their labour and their money) and such as desire to have lettice or other herbs for Winter, must now take heed in the increase of the moon.

In September.

Days	Sun rise:	Sun sets.
1	6 ho. 24. m.	6 ho. 26. m.
7	6 ho. 26. m.	6 ho. 14. m.
14	6 ho. 2. m.	5 ho. 58. m.
21	6 ho. 14. m.	5 ho. 46. m.
28	6 ho. 28. m.	5 ho. 33. m.

In this month of September, it being now season to begin to [illegible] pasture for Sheep, they may also safely bath and bleed, all things enjoying now their proper natures and vertues, and fruits as are ripe, not infected or vitified are good for both people that have good and vigorous stomachs to eat: It is a very good time to make conserves of Barberries and quinces.

You may now sow your winter herbs it is also very good for you to set artichoaks, Rose-trees, apple-trees, warden trees, strawberries, violets, lilly flowers, &c. plots are to be gathered in the full of the moon, [illegible] parsnips, and gather your hops in dry weather; [illegible] husbandry is to plow and sow, and in the end of your [illegible] grain, good husbandry is plucking of hemp and [illegible] stalking of hemp.

In October

Day	Sun riseth	Sun setteth
1	6 ho. 34. m.	5 ho. 28. m.
7	6 ho. 46. m.	5 ho. 14. m.
14	7 ho. 0. m.	5 ho. 0. m.
21	7 ho. 15. m.	4 ho. 45. m.
28	7 ho. 26. m.	4 ho. 34. m.

In this moneth thou mayest safely take physick, and also bath if occasion require it for thy health, accommodate thy self to hot meats and drinks, and make use of good wholesome wines to nourish and breed good blood, and make the spirits active, but be sure to be carefull that you take not cold, least you run the danger of meeting that malitious and tyrannous distemper call'd the quartan Ague, or other such like dangerous and pernitious diseases:

Now you may remove young trees, as apples, pears, plumbs, quinces, roses, &c. and sc peale, & parsnips; removing the time of the moon: Good husbands need not be admonished on, to their sowing of wheat, or setting of nuts, acorns and Filberts, and other such like pieces of husbandry at this time:

In November.

Day	Sun riseth	Sun setteth.
1	7 Ho. 33. M.	4 Ho. 27. M.
7	7 Ho. 42. M.	4 Ho. 18. M.
14	7 Ho. 52. M	4 Ho. 8. M.
21	8 Ho. 3. M.	3 Ho. 57. M.
28	8 Ho. 9. M	3 Ho. 51. M.

At this time begin to leave off the courses of Physick which you either have taken, or meant to take: and so let nature a little rest therefrom until toward March (unless some great necessity should urge and constrain you) take good and nourishing meats and drinks; and wholesome wine, or other liquors that may breed spirits and ferment the blood, keep upon of warm clothing and be sure to keep dry in your feet, or else will

you will be certain to be troubled with unwholsom rheumes and colds, whereby many other inconveniencies and prejudice to health will arise: You must also beware of a hot house this month.

In the new of the moon you may do well to remove young trees as you were directed in the last month, as also crab-tree stocks to graft on when you please, it is good time in the wane of the moon to set beans, setting the moon be in good aspect or conjunction of Jupiter or Venus, it is also good now to make malt and kill Beeves and Swine: for Artichokes Beet and bacon, and if the weather prove not too hard, you may now sow parsnips also.

In December.

Day	Sun riseth	Sun setteth
1	8 hour and 12 min.	3 hour and 48 min.
7	8 hour and 14 min.	3 hour and 46 min.
14	8 hour and 15 min.	3 hour and 45 min.
21	8 hour and 12 min.	3 hour and 48 min.
28	8 hour and 7 min.	3 hour and 53 min.

In this month of December keep your body and head both from cold, and eat such meats as be of a hot and nourishing quality, abstain by all means from physick, unless thy sickness be thy Apothecaries shop, good fire and warm clothing thy nurse, merry company (and a glass of good wine moderately taken) thy keepers, and let good hospitality and charity be doing as thou would be done unto, thy exercise:

Remove young trees and bushes, in the wane of the moon, if the weather prove not too extream cold and unseasonable. Set beans, and peale at this time, and those herbs that cannot endure the cold, cover them with straw to keep them from frost and snow: Make use of these short rules, heed them certainly, so thou may prove, not only thy own astrologer but Physitian, Chirurgion, Gardiner, and indeed what not.

Soli sapienti Deo sola Gloria.

Having a little spare room left, I shall therefore present my Reader with the preparation of mine Sympathetical Powder, and also with the various uses in the curing of all wounds speedily and without trouble.

You must first understand, there are two powders thus called, the one simple, the other compound, the difference is but small, howbeit, for that small difference sake, I shall present you with both of them.

1. Of the Powder Simple.

First, you must take a sufficient quantity of Alcalcandis Romani, *and dissolve it in clear spring-water, then make your filtration through grey paper, the best you can get, afterwards let it evaporate on a clear fire, and then coagulate or harden on a fit place, reiterate this your work often until it is purged from its dross, and that its greenness bear testimony of its purity. Then beat this into a gross powder, and expose it to the Sun-beam; the Sun being in* Leo, *for the space of fifteen days, or 360 hours, in which time you will find it calcin'd to a fine white powder, and that is a certain evidence of its true preparation. And it is therefore to be kept in the Sun, until it come to his whiteness and colour, although it should prove a longer time then fifteen days, but that is the usual time in which it is prepared.*

Now the Sun enters Leo *always about the thirteenth day of* July, *according to the account used in* England, *and that you may be sure the Sun is in that sign, begin your operation some four or five dayes after he is entred into it, for from*

the

the fifth degree to the five and twentieth, the Sun will be found the strongest.

When you expose it to the Sun, let it be in a dry and a clear day, and not in one that is either moist or misty, least the Medicine be spoyled with too much humidity: howbeit, if after it be rightly & duly prepared, it by misfortune come to be moist and liquid, you may with a gentle heat endeavour to reduce it again to its own form. This Powder being kept in a dry place, endureth many years in very good force and vertue.

2. The Powder Compound.

Take of the simple powder as before prepared, the same quantity of Gum Tragacanth, curiously pulverized, and mixe it according to art together with that: You may add hereunto the Powder of Comfrey, dryed in the shade, alike quantity also, as of the Gum Tragacanth.

The vertue of these Powders is this. The simple powder cureth all wounds whatsoever, yea, even of Gun-shot it self, and those wounds that have been looked upon as incurable, have been cured by it, as wounds in the Guts & Bladder, &c. Now the compound powder cureth all wounds that have joyned unto them, the fracture or fissure of a bone.

How this Powder is to be used.

You must take a piece of linnen cloath, or any other cloath, or if in case that be not to be obtained, take any stick or stone, or the like, and if the wound

wound be external, dip it into the blood as it flow-eth out thereat; But if it be internal, put it in-to the wound, that it may touch each part there-of, then sprinkle the cloath, or other matter thus coloured or besmeared with the blood of the wound with the Sympathetical powder, then fold up the said cloath thus dressed into another clean cloth, and keep it in any temperate place, as neer to or as far from the Patient as you please, but a mo-derate distance is best.

Having so done, wash the wound with warm wine immediately, or else with the Patients own Urine, then apply clean cloaths to the wound each other day, or oftner, as the flowing of the matter shall require, and keep all the foul cloaths together that are fouled with the matter pro-ceeding from the wound, laid up in a place like-wise of good temperature.

If the wound become Ulcerous before the Ar-tist see it, he is to follow the same method with the suppurated matter that floweth out of the wound, as is usual in resent wounds.

But if the wound be inflamed with a hot and fiery humour, put the cloaths that are infected with the blood or matter of the wound into a cold place, as under ground somewhere, or into a tole-in or pewter box set in cold water, till the wound come to its own habit again. But, if the wound be of a cold temperature, then the contrary, you must put it into a hot place, &c.

If

If this wound be with a fractured bone, and any part thereof in eminent danger by dead flesh, he must cut it off, then having sprinkled the cloath (dipped in blood) with the compound powder, and having laid it up as afore-said, he must set the bone, and use such implements as for fractures.

If the wound be very gross, then mix greater quantity of the Sympathetick powder, then of the Gum Tragacanth, *but if it smart much, you must then take more of the* Gumm, *then of the powder.*

Some are of opinion that this powder must be calcin'd by fire, but I conceive the rayes of the Sun better, other conclude that it may be calcin'd with the heat of a mans body, by carrying it in his pocket, but I leave every man to his experience in this matter.

Thus have I fully, faithfully, and [illegible] *communicated unto the world this excellent Receipt, a receipt of such known & approved* [illegible] *& which to my knowledge, has been sold to* [illegible] *persons for 30. l. and sometimes 40. l. but* [illegible] *seem a publick good, more then my own private advantage, a Sympathetick conscience & more then millions of Gold. And so* [illegible] *Reader, I wish and pray, much good it may* [illegible] *thee.*

FINIS.
